A brief treatise conteinyng many proper Tables and easie rules, very necessarie and needefull, for the vse and commoditie of all people, collected out of certayne learned mens woorkes.

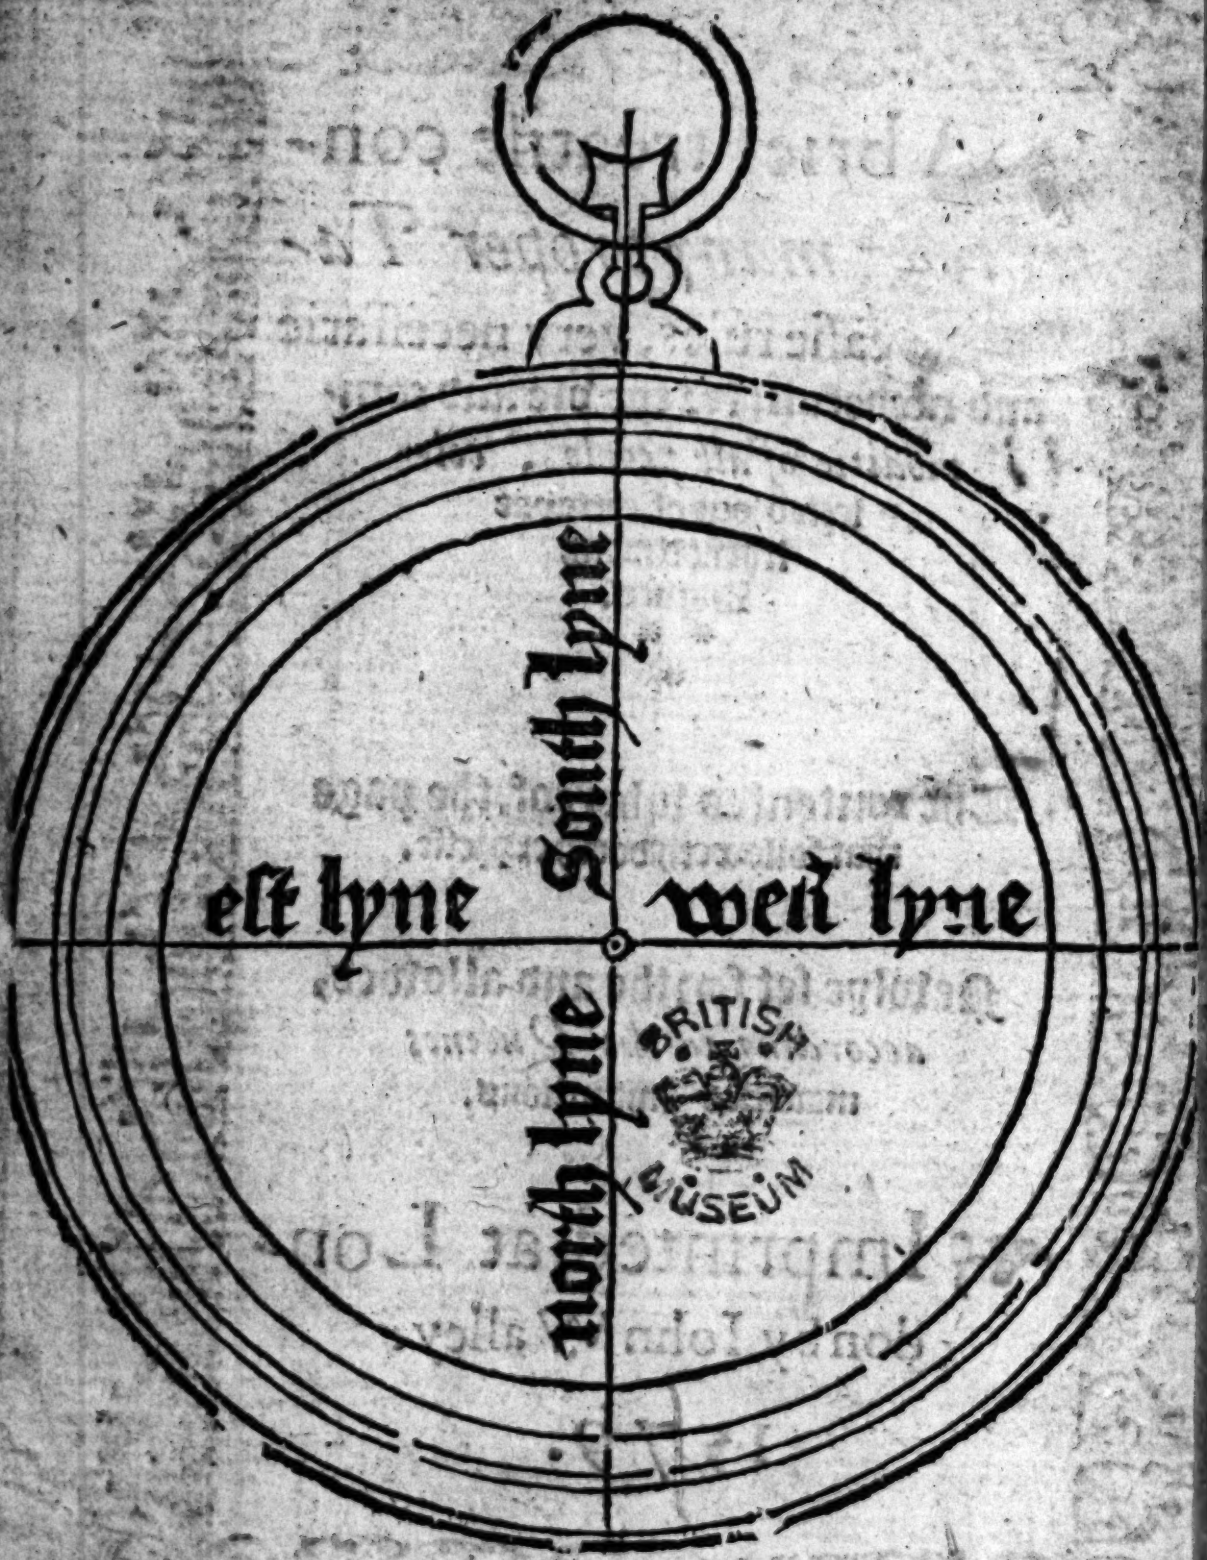

* *
*

The contentes whereof, the page that followeth doeth expresse.

Newlye set forthe and allowed, *according to the Queenes* maiesties Injunctions.

Imprinted at London by Iohn Walley.

1579.

BRITISH MUSEUM

¶ The contentes of this booke.

First, a rule to knowe the begynning and ending of the Termes, both Spyrituall and Temporall.

A Calender perpetuall, shewing what signe and degree, the Sonne is in euery day of the yeere.

An instruction for the ready vnderstanding of the computation.

A newe and more briefe accoumpte of the yeeres of our Lorde, then hath beene before set forth, agreeing with the yeeres of the raygnes of all the Kinges of this Realme, since the Conquest, whereby readilye ye maye finde the yeere of our Lorde, the Prime, the Epact, the Sondayes letter, the leape yeare, the beginninge of euerye Kynges raigne, and the nomber of yeeres that they raygned, and also may quickly vnderstande the accoumpt of the yeeres of any Euidence.

An euerlasting Table to finde out the Sonday letter, and an other for the Prime and Epact.

A rule to knowe the age of the Moone, her full, chaunge and quarters for euer.

A Table to knowe howe long the Moone shyneth, and when she ryseth and setteth.

A rule to knowe the true hower of the nyght by the shadowe of the Moone in any Sonne Dyall.

A Table to finde for euer the feastes of Easter, and all other moueable Feastes, aswell for any yeere paste, an any yeere to come.

A rule to knowe the Dogge dayes.

An Almanacke for thyrty yeeres to esme, wherin ye may readily finde the moueable Feastes.

A rule to knowe the Vigilles and Fastynge dayes throughout the yeere.

A rule to knowe howe many dayes euerye Moneth hath.

Certaine Tables to know the Ebbes and Flouddes, for moste Portes and Hauens in Englande.

A Table to shewe what sygne the Moone is in, and
shall be for euer, also what parte of mannes body the sign
doth rule, and what infirmities are incident thereto.

An easie waye to knowe in what sigue the Moone i
in.

Certaine elections that are to be chosen by the cours
of the Moone.

Certayne Tables that shewe the ryling and setting o
the Sonne, the length of the day and night artificiall. &c.

A Table to knowe what Planet rules any howre, ey
ther by daye or nyght.

A Table to knowe the lengthe of the Planetary
howers.

A figure shewing the same more easier & readyer with
out tediousnesse.

The properties and inclinations of the Planets.

The names of all the Colledges and Halles, in both
vniuersities, Oxforde and Cambridge.

The Shieres, Cities, and Boroughes, that haue plac
in the Parliament.

The names of the Wardes, and Parishes in Lon
don.

All the principall fayres, in a more orderly maner, the
hath bene heretofore set forth.

The highe wayes also from one Towne to another
much larger then hath bene set forth before.

A perfect rule to knowe the Law dayes in the Court of the Arches, the Audience of Canterbury, and the Spyrituall and Ciuill Lawes throughout the yeere.

Michaelmas Terme.

S.Faith. S.Edwarde. S.Luke Simond & Iude
All soules. S.Martin. Edmond king Katherin.
S.Andrewe. Conception of our Lady.

Ye must well vnderstande that the fyrst daye ensuyng eache of the Feastes set downe before euery Terme, the court of Arches is kepte in the fore Noone at Bowe Churche, and in the after Noone the same first daye is kepte in Southwarke the Admyrall Courte for Ciuyll causes.

The seconde daye after each of these Feastes, the Audience court of Canterburye, is helde in the Consistorye in Paules in the fore noone, and the Prerogatiue Courte of Canterbury is kept in the same place in the after noone the same daye.

The thyrde day following any those Feastes, the Bysshop of Londons court of Consistorie is holden in Paules in the fore noone, and in the same place is the Court of the Maeenes highnesse Commissioners vpon Appeales, and the Court of Delegates holden in the after noone the same thyrde daye.

Hillary Terme.

S.Hillary. S.VVolstan. Conuers.of Paule. S.Blase.
S.Scolastic. S.Valentin. Ashvvésday. s.Matthie.
s. Chadde. Perpetua & felix. S.Gregorie. Ann.of our Lady.

Understande that the fowre firste Feastes of this Terme be neuer chaunged, but are certayne, the other are sometyme kept, and sometyme omitted, after the course of the yeere altered. And if it so chaunce, that one of those Feastes bee Ashwednesdaye, that are after Saint Blase daye, so that the same Lawe daye after Ashewednesdaye can not be kepte, because the Lawe daye of the other Feast doeth lyght on the same daye: the seconde Lawe daye after Asheswednesdaye shall be kepte, and the other omitted. And if the Lawe daye after Ashewednesdaye be the nexte daye after Saint Blase, then shall all and euery of those dayes be obserued in order, as they may be holde conuenientlye.

And note, that although Ashewednesdaye be the seuenth in order, yet it hath no certayne place, but is chaunged as the feast of Easter causeth it.

¶ Easter Terme.

The. 15. daie after Easter.	
Saint Alphege.	Gordiane.
Saint Marke Euangelist.	Saint Dunstane.
Inuention of the Crosse.	Ascention daie.

In this Terme, the fyrst sitting is alwaye kepte the Mondaye being the .xb. daye after Easter, and so after the Feastes here noted, which shall next followe by course after Easter, and the lyke space being kept betweene other Feastes, the rest of the Lawe dayes are kept the third daye after the Ascention, which is the last of this Terme. And if it happen that the Ascention daye dw come before any of those Feastes aforesayde, then they are omytted for that yeere.

And lykewyse, if any of those dayes come before the fifteene daye after Easter, those dayes are also omitted.

Trinitie

Trinicie Terme.

Trinitie ſondaie.	S.Botulphi,	S.Svvithine.
Corpus Chriſti.	S.Iohn.	S.Matgaret.
Boniface Biſhop.	S.Paule.	S.Anne.
S.Barnabe.	Tran.S. Thomas.	

Remember that the Lawe dayes of this Terme are chaunged by the meanes of Pentecoſt, and the firſt ſitting is holden alwayes the fyrſt lawe daye after Trinity Sunday, and the ſeconde Lawe daye is holden the fyrſt daye after Corpus Chriſtie daye, except it fall on ſome daye aboue named: which chaunceth ſometyme, and then the fytter daye is kepte, and after the ſeconde ſeſſion, accompt fowre dayes or there about, and then loke whiche is the neexte feaſte, and the fyrſt Lawe daye after the ſayde feaſte, ſhall be the thyrde ſeſſion. The other Lawe dayes followe in order, but ſo many of them are kepte, as for the tyme of the yeere is thought meete. And note generallye, that euerye daye is called a Lawe daye, that is not ſonday or holy daye, and that if the feaſt day being knowen of any Court daye in any Terme, the firſt or ſeconde daye following be ſonday, then the Court daye is kept after the ſayd Holy day or Feaſt.

Fyrſt of all, theſe dayes are not altered, excepte they lyght on Sondaye, or ſome Holy daye, and euerye daye is called a Lawe daye, vnleſſe it be Sonday or Holy daye.

A neceſſary and perfect rule, to know when the Termes beginne and ende, and howe many Returnes are in euery Terme.

Eyght dayes before any Terme be, the Exchequer openeth for certaintie. Except the Terme of Trinitye, that openeth but fowre dayes before truely.

Hyllarie Terme beginneth the .x xiij. day of Januarye, if it be not Sundaye, then the next daye after, and endeth the .xij. of Febryary.

Octabis Hillarii.		Craſtino Purific.	
Quind. Hilarii.		Octabis Purific.	

Easter Terme begynneth .xvij. dayes after Easter, and endeth fowre dayes after the Ascention daye.

Quind. Paſch		Mense.	Quinque Paſchæ.
Tres Paſchæ		Paſchæ.	Craſt. Ascention.

Trinitie Terme begynneth the next daye after Corpus Christie daye, and endeth the wednesdaye fortnyght after.

Craſt. Trinitatis.		Quind. Trinitatis.	
Octabis Trinitatis.		Tres Trinitatis.	

Michaelmas Terme begynneth the nynth of October if it be not Sonday, and endeth the eyght and twenty of November.

Octabis	Michael.	Craſt. anima.	
Quind.	Michael.	Craſt. Martini.	
Tres	Michael.	Octa. Martini.	
Mense	Michael.	Quind. Martini.	

In this Calender following: you shall ofentymes finde these letters B and E. The which signifieth suche dayes as the Egyptians note to be daungerous to begyn or take any thing in hande, as to take a Journey or any such thing.

Ianuary hath. 31. dayes.

The Moone. 30.

Warme meates this month conuenient bee,
vvhite vvyne also as holesome is
Fly sloth, svveete drinks, be ruled by me,
bleede not, but hath, forget not this.

An instruction for the perfect vnderstanding of the maner and order of the Computacion, and other Tables hereafter following.

The order of this final Booke, and the matters therein contayned, are as followeth.

¶ First, I haue placed herein a rule to knowe the beginning and ending of the Termes.

¶ Then followeth a Calender, wherein I haue obserued the Olde Saynctes dayes, not of superstition, as though I thought euerye of them mencioned in the saide Calender to bee a Sainct (for of some I knowe the contrary: Neyther if they were all Sainctes, do I therefore place them in my Calender.) But bycause it hath beene a custome of auncient tyme to vse their names, in signifying and making certayne the dayes, tymes, & Termes of the yere, as by the dating of dyuers olde Deedes, Euidenses, and Recordes it shall appeare. And bicause the same custome is yet retained in the returning of writtes and processes, and also is commonly vsed in the noting and settinge forth of the principall Faires and Markets, and other seasons of the yeare, those names seeme well for my purpose, and therefore I might not conuenientlye haue left them out. And vnto the saide Calender I haue added the Calendes, Nonas, and Ides, because diuers euidences are dated on those dayes, and by those woordes, and thereunto also

I haue

I haue added the vigiles and Festiuall dayes: more-ouer the very degree and signe that the Sun is in euerie daye of the yere, according to his mydle moeuing truely supputated, so that hauing this Booke, there shalbe no occasion to call for any other Calender.

Then begynneth my Computation of yeares, wherein is to be noted that euerie Page thereof is deuided into viii. seuerall parts or places as may appeare by the tytles ouer euery of their heads. In the first place are the yeres of our Lorde. In the seconde the Pryme: In the thyrde, the Epact: In the fowrth the Dominicall Letter: In the fifth, the Leape yere, whensoeuer it happeneth: In the sixt, are the names of the Kinges as they reygned, beginning with Wyllyam the Conquerour, &c. And in the same place also are the Monethes that euerye of them entred into their reygnes. And in the seuenth are the dayes of the Monethes that euerie of them beganne to reigne in. And in the viii. and last, are the yeres that euerye of them reygned.

Also in the ende of the reigne of euery King, I haue shewed the daye of his death, if he dyed being King, or the daye of his deposition if he were deposed, with a true accoumpt howe many yeres, Monethes, weekes or dayes he reygned.

And here I thinke it meete to declare somewhat of the commoditie and necessary vse of the Computation afore mencioned. And for the better instruction and vnderstanding thereof, I wyll moue certayne questions, and geue answeres to the same, in such sorte, as shall so vtter the order and manner thereof (as it were by exampls) that I doubt not, but the true and necessary vse of the same, shall plainely appeare to all men.

The Instruction,

1. Question.

I Woulde knowe by this Computacion in the fowerth yeare of King Edwarde the firste, what was then the yeare of our Lorde, the Prime, the Epact, Dominicall letter, and the Moneth and daye that hee began his reigne in, and what day in the weake the same was.

Aunswere.

Among the Kinges, seeke out for kinge Edwarde the firste, and then looke for the fowerth yere of his reigne, and there it appeareth to bee the yere of our Lorde. 1275. The Prime 3. The Epact. 3. The Dominicall letter F. The Moneth that he began his raigne in, November, and the 16. daye, whiche daye that yere was Saterdaye, as is easye to bee knowen if you looke in the Calender for the xvi. daye of November, accompting F. for Sundaye, then that daye must needes bee Saterday, and so of all other the like.

2. Question.

An Evidence dated the 15. Calendes of December in the iii. yere of King John, I Woulde knowe what day of the Moneth the same was, and how long it is sithen.

Aunswere.

Firste looke in the Calender in the moneth of November for the Calends of December, and there you

you shall finde that the xb Calendes of December is on the xbij. day of November. Then seeke in the Computacion for king John, and you shall find that the third yeare of his reigne was in the yere of our Lord 1201. And then set down this yere of our Lord wherein the question is asked, which is 1571. and take out therout 1201. & there resteth 370. And so it must followe that vpon the xbij. day of November next, it shalbe fithen the iiij yere of king John 370. yeares, and thus of the lyke.

3. Question.

An Evidence dated the second Sunday in Lent in the fowerth yere of King Stephen. I would knowe in what yeare of our Lord the same was, and also in what Moneth, and on what day the second Sunday in Lent was then.

Aunswere.

First looke among the kings for King Stephen. And when you have found him, then looke for the fowerth yeare of his reigne, and there you shall finde the yeare of our Lorde to bee 1138. and the Prime 18. and B the Sundaies letter. Then go to the table that teacheth to know Easter day and all the moveable feastes, which is the next table saving two after the Computation.

And there vnder the the title of Prime, seeke among those numbers for 18. And when you have founde it, looke downewarde from the lyne where the Prime standeth, and seeke for the nere B. whiche that yere was the Sundaies letter. And when you have founde B. go forward in that lyne, and there you shall finde the xx. daye of Februarye to bee that

yere

yere the first Sundaye in Lent, and therevnto put seuen dayes for one weeke more, and that sheweth that the second Sunday in Lent that yeare was the 27. daye of Februarye. Then set downe this present yeare of our Lord 1571. and take out there of the yere of our Lorde that was then which was. 1138. and there resteth. 433. And so it doth plainly appeare that the. 27. daye of Februarie next comming it shall be. 433. yeres from the fowrth yere of the raigne of King Stephen. And thus you maye do with the lyke.

4. Question.

I haue a lease for. xxx. yeares, that beganne at Mighelmas in the. xvii. yeare of King Henry the. 7 My desyre is to knowe this present yeare. 1571. whether my lease be expired, or howe many yeres I haue to come.

Answere.

First in the Computation looke among the kings for king Henrie the. 7. and then for the. xvii. yere of his reigne, which you shall finde to be in the yere of our Lorde. 1501. The which number take out of this present yere of our Lorde 1571. and then resteth 70. And so many yeres of the sayde lease shalbe expired at Mighelmas next. and then shall remaine. 30. yeres to come, and so of the like.

5. Another question and plaine example meete for such as cannot extract one number out of another.

A lease dated the. vi. of July, in the. xi. yeare of the reygne of King Henrie the eyght, for the terme

of

of .xl. yeres that begannne at our Lady daye in Lent then next followyng: I wouldе nowe knowe whether the sayde leasе be expyred, or howe many yeres there are to come.

Aunswere.

Fyrst looke in the Computation among the kings for kyng Henrie the eyght, and for the .31. yere of his reigne, which you shall fynde to bee in the yere of our Lorde 1539. Then at the next yere followyng begin to reckon, and call that one, and so tell downe in order all the yeres followyng, and ende with this present yere 1571. And the whole, you shall fynde the number of 32. And so many yeres of the sayde leasе shalbe expired at our Lady daye in Lent next comming. And at that tyme there shall remaine to come of the saide leasе .viij. yeres, and thus you maye accoumpt the yeres of any leasе.

6. Another very plaine question or example easie for all men to conceyue and *in this time is commonly vsed.*

A leasе dated the .17. day of August in the .3. yere of the raigne of kyng Edwarde the .vi. for the terme of .21. yeres, which began at Mighelmasse then next followyng. I aske the question this .xij. day of August 1571. whether the saide leasе be expired, or howe many yeares are yet to come?

Aunswere.

Fyrst in the Computation among the Kynges, seeke for kyng Edwarde the .vi. and for the .3. yere of his raigne, and there you shall fynde the yeare of our

Lorde

Lord to be 1550. Then begin at the next yeare after, which is 1551. and call that one, and so tel downeward al the yeres. to this present yere. 1571. And in the whole you shall find 21. which plainely declareth that at Wighelmas next, the aforesaide terme of 21. yeares shalbe fully expired. And this you maye doe in the accompt of all termes of yeares.

Note also that in the saide Computation diuers of the kings haue in the first yeare of theire raigne no yere of our Lorde. The cause is that they began in the same yere that the former king died in. And therfore when you tell the yeares, do not reken them that haue no yeare of our Lord.

Note also that the yeare of our Lorde after the Computation of the Church of England, beginneth euer the 25. of March which is the dayt of the Annunciation of our Lady.

Note also, that when thou accomptest any terme of yeres, that the same terme that thy leale first began in, must end & finish in the last yeare of thy reconing at the selfe same Terme. As if thy leale began at Wighelmas for xxi. yeares, then it must end at Wighelmas the same yeare that the whole xxi. yeres are expired in, and if at Midsommer, then it must ende at Midsommer the same yere, as the last question and example doth playnely shewe.

And this I trust may suffice for the instruction of the vse, order, and commoditie of the saide Computation.

¶ A declaration of these two Tables.

By the first of these two Tables maye ye knowe the Cycle of the Sunne and Dominicall letter

er orderly and perfitely for euer, any time past, or ny time to come, which maister Graftons rondle uld not do, if ye list to extend it aboue 1600. in the ace of 1573. set 1601. and so count orderly as ye d at first for any yere to come. And for anye yere st, doe thus in the place of 1600. set 1572. and so unt vpward till the yere ye seeke, and in like ma= r do by the table that serues to finde the Prime d Epact, and so are they perpetuall without alte= ng, which no one rondle can perfourme.

Otherwise for the circle of the Sun & Sundayes tter. Add to the yere of our Lord 9. and deuide by 28 d the rest shewes the circle of the Sunne, whereto the Table aunsweres the letter dominicall, as in is example, to the yeare 1573. I adde 9. which akes 1582. which deuided by 28. the quotient is 6. and the remain is 14. which is the circle of the unne for this yere, wherewith I enter the Table d finde that D aunswereth thereto, which is the ominicall letter for this yere, and so of the rest.

The leape yere as ye may perceiue by the former able chaunceth euery fowerth yeare, for when ye ay deuide the yere of the Lord into 4. partes, then is leape yere.

The Golden number and Epact.

The Prime is a number that beginneth with . and encreaseth yearely by one till it come to 19. nd then beginnes againe, and thus maye ye finde . To the yeare of our Lord ad 1. and deuide it by 9 the rest shewes the golden number for that yeare.

and

and for ease of working ye maye leaue. 1500. and deuide the reste as for example by this yere 1573. which is more then. 1500. by. 73. the which I deuide by. 19 and there resteth. 16. which is the Prime or golden number for this yere that present is, and the next yere shall be. 17. and so forth till. 19.

For the Epact.

The Epact or concurrent is thus founde. Multiplie the Prime by 11. and take awaye 30. and the reste is the concurrent or Epact. As for example 1573. 16. is golden number, which multiplye by 11. makes 176. which deuided by 30. resteth 26. the Epact for this present yere. Or thus more easilye. Ye must imagine 3. places, and on the thumbe most fitly, that is the roote of the thumbe the fyrst, and the myddle ioynt the seconde, and the toppe of the thumbe the thirde, then in the first place which is the roote of the thombe, put this number 10. and in the myddle ioynt of the thombe. 20. and at the toppe 30. this put in memorie, by the order of these places shalbe coumpted the golden number. As one in the first place or roote, and two in the seconde or myddle ioynt, and three in the thirde place, then so returning set 4. on the roote or first place, 5. on the seconde, &c. till ye come to the Golden number for the yere for the which ye seeke, and the number of that place must be ioyned with the Golden number of the yere, & that, that it amounteth to, shal be the Epact, so that it passe not. 30. but if it passe. 30. let go 30. and the remaine is your request. As in this example I will expresse it more playne. In the yeare of our Lorde God. 1573. the Prime is 16. which coumpted by the sayde three places of the thumbe endeth at the firste, where this number 10. is placed, which both

added

dded make. 26. the verie Epact for this present ere, &c. And note that the Epact beginneth the first aye of Marche, and the Dominicall Letter and ezime the first daye of Januarie.

¶ To knowe the age of the Moone.

The epact knowyng, to knowe the age of the Moone e must haue thyes numbers. The first is the epact, he seconde, the number of the Monethes from Marche (including both) the third, the dayes of that Moneth passed, then ioyne these thyee numbers to= ether if they ryse not to. 30. so olde is the Moone if ey passe. 30. being left, they also are the age of the Moone, this is meant by the Monethes that haue. 31 ayes, for in them that haue but 30. dayes the con= nction is at the 29. daye, and they that passe 29. are he age as before.

As for example.

This yeare for the 15. of August I would nowe the age of the Moone. First the epact is 26. nd the monthes from March to August, are 6. and 5. the daye of the moneth, which all put together akes 47. from whence take 30. and there rests 17. he age of the Moone that daye.

Another example.

For the 8. of September the epact being 26. he monethes 7. and dayes 8. added together makes 1. from thence take 29. for September hath but 0. dayes, and there restes 12. the age of the Moone or that daye, and in lyke maner shall we giue to Fe= ruary 29. dayes of the Moone.

And

The Instruction.

And to know the day of the change, doe thus. To the Epact ad all the monethes from March, and if they ioyned together come not to 30. loke what they lacke of 30. and at so many dayes of the moneth, the Moone changeth. As for example. In the yere of our Lord God 1573. the Epact is 26, and September from March 6. which added together make 32. from which take 29. because Septem. hath but 30. dayes, & there rests 3. which being taken from 30. leaues 27. vpon which day the Moone changeth this yere in Septemb. Againe to make it more playne, I will proue by March that paste is. The Epact is 26. which take from 30. (because March hath 31. dayes) and there resteth 4. which is the day of the change. And to knowe the full or oppoſion, adde to the change day 14. dayes, 18. houres, and for the other aſpects see this little Table that followeth.

¶ A Table to knowe howe long the Moone shineth, and when she ryseth and setteth.

The age of the Moone increasing	The howers she shines.		Her age decreasing.
☽	H.	M.	☾
1	0	48	29
2	1	36	28
3	2	24	27
4	3	12	26
5	4	0	25
6	4	48	24
7	5	36	23
8	6	24	22
9	7	12	21
10	8	0	20
11	8	48	19
12	9	36	18
13	10	24	17
14	11	12	16
15	12	0	15

The vse of this Table is this, the age of ☽ Moone once knowen and founde in the syde of the Table, then answering thereto, shall ye see the howers and minutes of her shyning to be counted from the Sunne setting, all the encreasing tyll the full, and tyll then she shyneth in the euenninges, and after the full, she shyneth before the Sunne ryse in the morning, so many howers before the Sunne ryse as the Table sheweth, and for her rysing and setting doo thus all the encrease, adde to the hower of the Sunne rysing, the howers founde in the Table, and it shewes the hower of her rysing. Againe adde to the hower of the Sunne setting, the howers & Minutes found in the Table, and that is the hower of her setting. Then after the full for her rising, doo thus from the Sunne rysing, take the howers founde in the Table, and the rest shewes the rising, and from the hower of the Sun setting, take the howers founde in the Table (borowing twelfe, if the subtraction can not else be made) and the rest shewes the setting of the Moone.

The age of

All theſe aforeſaid by example ſhalbe made eaſie.

The. 18. daye of Septcmber. 1573. I finde the Moone to bee. 21. dayes olde, wherewith I enter the table, the Moone decreaſing and finde. 7. howers 2. minutes anſwering thereto, ſo I ſay the Moone ſhines ſeauen howres. 2. minutes in the morning before the ſame riſe, and the ſunne the ſame day riſeth at. 6. 12 minutes, whereto I put. 12. howres, elſe couldc not the ſubſtraction be made, and it makes. 18 howres. 12 minutes, from which I take. 7. houres. 2. minuts, and there reſts. 11. houres. 10 minutes. before mydnight, at which inſtant the Moone ariſeth. &c.

Another example.

The firſt daye of October 1573. the Moone is 10 dayes olde, wherwith I enter the table, the Moone increaſing, and find. 8 houres anſwering therto, which ſhewes that the Moone ſhineth. 8. howers in the euening after the ſunne is ſet, and the ſunne the ſame daye ſets at. 5. a clocke. 15. minutes, whereto I put. 8. the howres of the table, & it makes. 13. howers. 15. minutes from which I take. 12. which is midnight, and there reſteth 1. hower. 15. minutes, which ſhewes that the Moone ſhall ſet the ſame day at one a clocke. 15. minutes after midnight, and the ſame day the ſunne riſeth at 6. 41 minutes, to which I ad. 8. and it makes. 14 howers. 41. minutes. from it I take 12. (for that is noone) and there reſts. 2. howers. 41. minutes, which ſhewes that at 2. a clocke. 41. minutes after noone the moone riſeth though to bs vnſeene. And ſo for all other times.

¶ A rule

the Moone.

¶ A Rule to knowe the howre of the night, by the shadow of the Moone in any Sunne dyall.

☽	H.	M.	☾
1			29

A discription of the order and vse of the aforesayde Table as followeth.

FIrst note, that the sayde Table is deuided into fiue partes or places. In the first is the Prime: in the seconde the Dominicall Letter, in the thirde, the first Sundaye in Lent, in the fourth, Easter daye, in the fyfte, Rogation weeke, and in the sixte, Whytsondaye.

And for the better vnderstanding of the vse thereof, ye must alwayes when you desire to knowe the tyme of any the sayde feastes, firste consyder what yeare of the Lorde it is that you woulde knowe them in, and then looke what was, or is the Prime of that yeare, and the Dominicall Letter, and those you maye easelie finde and learne in the lytle Table for that purpose, that is before set forth. And when you knowe the Prime and Sundayes Letter, then come to this Table, and it wyll easelie shew you your desire.

Example.

I Woulde knowe in the yeare of our Lorde. 1574. when shall be the firste Sunday in Lent, Easter daye. &c.

First I go to the Table aforesayde, and there in the first colom, I seeke out the yeare of our Lorde. 1574. and in the second colom directlie against that, there I finde that yere the Prime to be 17. and vnder that, the Dominicall Letter to be C. Then I come to the aboue sayd Table, and first vnder the tytle of Prime, I seeke for the number of 17. and when I haue founde the same, then I looke downwarde among the Sundayes Letters for the nert C. that is after the Prime, for that is the Sundayes Letter for that yere. and when I haue founde C. I go forewarde in that lyne

where C. standeth. And strike I finde that the xviii daye of Februarie, that yeare shall be the first Sunday in Lent. The xi. daye of Aprill Easter daye. The xvi. daye of Maye Rogation weeke, and the xxx. daye of Maye Whitsonday. And thus may you do with all other, both for time past, and time to come, for euer.

Note also that this Table in the beginning sheweth the lowest Moneth and daye in the yeare, that Easter and all other moueable feastes do fall in. And in the ende, it sheweth the highest Moneth and daye that Easter, and the moueable feastes do ascende vnto: so may it be truelie sayd, that it is a perfect table.

And yet herevnto will I adde one rule, which though it be in olde and rude meter, yet is it worthie of memorie, and it is the same rule, whereby this Table was made, which is this.

In March after the first C
Looke the Prime where euer it be,
The third Sunday after, Easter day shalbe
And if the Prime on the Sunday be,
Then recken that for one of the three.

¶ A rule to knowe certainely the Dogge dayes.

¶ The Dogge dayes do alwayes beginne the vi. of Julie, and ende the xvii. of August.

The yere of our Lorde.	The Prime	The epact.	Sondaies Letter.	Leape yeare	Ashwensdaie the first day of Lent.	Easter day	Rogation vveeke	Whitsonday

The yere what it is.

A yere hath { By the course of the Sunne .xij Monethes.
By the course of the Moone .xiij Monethes.
Of weekes fyftie and two, that is. 365. dayes, except it be leape yeare, and then it hath 366. dayes.

¶ A rule to knowe all the Vigiles and fasting dayes throughout the whole yeare.

With moueable feastes, I will begin,
As Easter, Ascention, and Whitson euen
The Rogation weeke, in like case
Must be kept as it commeth in place.
And the Apostles, as Peter and Paule
Iames, Mathy, with other mo.
Andrew, Mathew, and the rest as they fall
Bartholomew, Thomas, Iohn Baptist also
Simon and Iudes, and the Purification
The birth of Christ, & the Annũciation
Ember, Fridayes, and Lent as it doth come:
The euen of all Saints, & so we haue done

¶ A Rule to know how many dayes euery Moneth in the yere hath.

Thirtie dayes hath November,
Aprill, Iune, and September,
Februarie hath .xxviii. alone,
and all the rest haue thirtie and one.

A Table for the tydes.

¶ A declaration of the Tables last before mencioned.

¶ If you be desyrous at any tyme to knowe when it is or is a full Sea, or high water at any Port or Hauen in Englande, Wales, or Irelande, or in any other parte of the worlde. If first by your owne knowledge, or the knowledge of any expert Mariner, you knowe when you see the Moone in such a part of the Fyrmament, that then it is full Sea at such a Port or Hauen, then these Tables shall be nedeles for you: but if you can not so do, and woulde learne, then resort to these Tables, and first consider with your selfe howe many dayes olde the Moone is, the daye that you desire to knowe the tyde. And in the middle of the sayde Tables, you shall finde in the vppermost part of them, this tytle The age of the Moone, and right against the daye, of the daye of the age of the Moone, you shall finde on both sides, the places and poyntes of the Firmament, as South, South and by West, and South South West, &c. And next vnder that lyne, are these letters H.M. Which signifie Howers and Minutes. Then hauing in memorie the age of the Moone as aforesayde, go directly to the tytle of that place of the Firmament, to the which when the Moone commeth, maketh a high water, and there you shall finde the Howre & Minute when it is full Sea in that place.

¶ *Example.*

¶ I woulde knowe at what howre it wyll be a full Sea, or highe water at London Brydge the. xx daye of December next, being in the yeare of our Lord 1571.

¶ *Answer.*

For ebbes and fluddes,

Aunswere.

First reſorte you to the former Table, that teacheth you to knowe the age of the Moone at all tymes, and by that rule you ſhall finde, that the xx. daye of December nexte, the Moone ſhall be fowre dayes old. Then looke vpon the tytles in the vppermoſt parte of the aforeſayde Tables, and among them you ſhall finde London.

And directlie in the line next vnder the ſame, you ſhall finde Southweſt, the which declareth that when the Moone is in the Southweſt, that then it is full Sea at London Bridge. Then go downe the line of the age of the Moone, vntill you come at the fowrth daye, and there you ſhall finde on the left hande of the ſame, directlie vnder the line, where Southweſt ſtandeth, theſe figures 6.12. which is vi. of the cloke and xii. Minutes, at which tyme the aforeſayde xx. dayes of December next ſhalbe high water at London Bridge. And in the vppermoſt parte of the aforeſayde Tables, I haue written the names of ſome Portes, at which tyme the Moone comming to that place, cauſeth a full Sea, and vnto them ye maye adde ſuch other as you haue or ſhall haue knowledge of.

(.)

A table shewing what Signe the Moone is in, and shalbe for euer: and also what part of mans body euery signe doth gouerne with the infirmities incident thereto.

¶ A declaration of the Table, that is on the other syde, shewing at all tymes what sygne the Moone is in.

Fyrst, for the better vnderstanding thereof: Note that it is deuided into fiue tytles, that is to saye, into Monethes, Dayes, Prime, Signes: and gouernement of the sygnes. Nowe if you wyll knowe at any tyme what signe the Moone is in, you must first seeke out in the sayde Table among the monethes for the moneth wherein you desire to be certifyed and lykewise among the title of dayes, for the daye of the moneth that you desire. And when you haue founde them, then beginne at the moneth, and tell the same for one daye, and so go forth vntyll you come to the number of the dayes that you wouldе haue, and note well what daye the same doth ende vppon, and keepe it in your memorie. Then seeke for the Prime of that yeere among the tytle of Primes, and accoumpting the Prime for one, tell so many dayes as before you committed to memorie: and then on the right hande you shall finde what signe the Moone is in, and what member of mannes body it gouerneth with the infirmities thereto pertayning.

¶ Example.

¶ I wouldе knowe the twelfth daye of Nouember next, in this present yere of our Lorde. 1571. what sygne the Moone wyll be in. Fyrste I looke in the aforesayde Table, among the tytle of the monethes, and there I finde November together

with

with February placed against the figure 1. which is in the title of dayes, and there I begin to reckon, and call the figure of 1. one, and so tel downe warde vntill I come to 12, and I finde that the same endeth vppon 12. which number I keepe in memory. Then I seeke for the Prime of this yere, which is 4. among the title of Primes, and on the left side thereof standeth 11. and there I begin againe and call that 11. one, and so go downeward till I come to the number which I had kept in memory, which was 12, and on the right side thereof, I finde the signe to bee Capricorne which gouernes the knees with his infirmities, ytching, red spots, leprosie.

A perfect, easy and ready rule to know in what signe the Moone is in euery day.

When ye knowe the age of the Moone, double the same, and then deuide it by 5. and the quotient shall shew you how many signes ye shal adde to the signe that the Coniunction was in, and the remayne euerie vnitie thereof geueth sixe degrees, which ye must ad to the degree of the Sun, the day of ☌, if they passe 30. ad one signe, & the rest wyll shewe the degree of the signe, or verie neare: but of the signe it wyll neuer fayle, for suertie.

Example.

This present 18. of October, the Moone is 23. which doubled is 46. and denided by 5. the quotient is 9. and 1. rest that is 9. signes, and 6. degrees which I adde to the signe and degree of the coniunction (that is Virgo the 12.) and it is 69. 17. and so of all others.

¶Certaine elections that are to be choſen by the courſe of the Moone in any ſign of the Zodiake.

And firſt of blood letting.

LEt blood at no time without great cauſe, for it weakneth & maketh way to many diſeaſes (but if ye do) ſee it be after good digeſtiō & faſtyng in any temperat day, & afterward vſe fine meates of light digeſtion, abſtaining from al exercile, as bathing, watching & carnall copulation. Nert cōſider the time of the yere if it be in ſpring, let blood at the right ſide: and in harueſt at the left. Thirdly, the age of the perſon: for yonge perſons from the change to the firſt quarter: for them of midle age from the firſt quarter to the full, & for elder ye perſons from the ful to the laſt quarter: & for olde folke from the laſt quarter to the change. Fourthly, conſider the parties complexion. If he be colleryke then let the moone be in ♋ ♍ the laſte halfe or ♓. If he be phlegmatike, in ♈ or ♐. If hee bee malanch in ♎ the firſt part, or ♒. But if hee bee ſanguine, let the moone be in any of the aforeſayde ſignes, only beware thou let not blood in any member when the ☽ is in the ſigne that ruleth ye ſame: neither the day of the change, nor the daye before nor the day after, for that were perillous.

The beſte tymes to purge, if the time be temperat. by drinkes, by electua. by pilles. } ☽ in ♍ ♋ ♓

To enter bathes for what diſeaſeſes ♋ ♍ ♓. For cold diſeaſes ♈ ♌ ♐.

To ſtop fluxes, rumes & lares ♂ ♑ ♈.

To take preparatiues ♊ ♎ ♈.

To take vomets ♂ ♈ ♈, To take Gargariſes ♈ ♋ ♈. To take Gliſters ♎ ♍.

Good

Good to comfort the vertue. { Attractiue, Retentiue, Digestiue, Expulsiue. } the moone in { ♈ ♌ ♐ ♉ ♍ ♑ ♊ ♎ ♒ ♋ ♏ ♓ }

To cutte hayres that they growe better ♉ ♍ ♎ ☽ increasing.

To gelde or lib cattell ♐ ♑ ♓ ☽, decreasing.

Good to sowe or set ♉ ♋ ♍ ♎ ♑. ☽. increasing.

To graffe or plant ♉ ♒ ☽ increasing.

To cut Vines ♈ ♍ ♎. ☽ increasing.

To fell woodde for tymber from S. Barnabas day in June, tyll the 1. Calen. Janu. in the waine of the ☽.

To fell Firewood, that the stocke maye soone spring from the chaunge to the first quarter.

To remoue graffes or yong Trees, at the last quarter of the Moone.

¶ The deſcription of theſe two Tables folowing.

THeſe two Tables folowing ſhall perfectly ſhew you the breake of the daye, ſunne ryſing, lengthe of the daye, and right artificiall, the ſetting of the Sunne, and twielight for the whole yere, wherby ye maye knowe the Planetarie howre, and what Planet doth raygne any daye or howre for euer, the vſe is this.

In the firſt collume ſeeke for the moneth wherin ye are eyther diſcending, or aſcending, then in the next collume therto, finde out the daye, or the day next therto, and right there againſt towarde the right hande if ye deſcend, ſhall ye finde the howre and minute of any of the aforeſaide, in the colum vnder the title thereof: but if ye aſcende by the right ſide of the Table, then looke towarde the left, and do as before, the worke is ſo eaſie, it needes no example at all: but becauſe I promiſed to make it as playne as might be, I wyll ſhewe an example ſufficient, and that is this. The 22. of September I woulde knowe all that is beforeſayde. I enter the Table, deſcending by September, and finding the 22. daye againſt the ſame in the nexte collume vnder the tytle, breake of the daye: I finde 4. 20. which ſheweth there at fower of the clocke 20. minutes is the breake of the daye. In the next 6. 18. which ſhewes the Sunne ryſing, in the thirde collume 11. howers 24. minutes the length of the daye, and 12. 36. in the fowrth the length of the night 5. 42. the ſetting of the Sunne, and 7. 40. the twylight, or the going downe of the daye light, and ſo of all other dayes.

¶ A Table to know what Planet rules any hower eyther of day or night for euer.

Gouernours of the day.	Sunday.	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saterday.	Rules of the night.
Sol	1	12	9	0	10	0	11	Iupiter.
Venus.	2	0	10	0	11	1	12	Mars.
Mercury.	3	0	11	1	12	2	0	Sol.
Luna.	4	1	12	2	0	3	0	Venus.
Saturne.	5	2	0	3	0	4	1	Mercury.
Iupiter.	6	3	0	4	1	5	2	Luna.
Mars.	7	4	1	5	2	6	3	Saturne.
Sol.	8	5	2	6	3	7	4	Iupiter.
Venus.	9	6	3	7	4	8	5	Mars.
Mercury.	10	7	4	8	5	9	6	Sol.
Luna.	11	8	5	9	6	10	7	Venus.
Saturne.	12	9	6	10	7	11	8	Mercury.
Iupiter.	0	10	7	11	8	12	9	Luna.
Mars.	0	11	8	12	9	0	10	Saturne.

The vse of this Table is thus.

Under the daye of your requeſt, ſeeke the hower that ye deſire, then on the lefte ſyde right there a gainſt ſhall ye ſee the Planette that gouernes that hower by daye, and at the ryght ſyde the Planette that rules it by night, as thus. On Thurſdaye the thirde hower of the daye rules ☉ and the 8. hower of the nyght gouernes ☽, and ſo of the reſt, for it is playne ynough.

A Table to knowe the length of the Planetary howre, from the shorteſt daye, and longeſt night, tyll the longeſt daye, and shorteſt night.

15	1. 25	1. 16	1. 17	1. 18	1. 19
16	1. 20	1. 21	1. 22	1. 23	1. 24
17	1. 25	1. 26	1. 27	1. 28	1. 20

The vſe is this.

Knowe the length of the daye or night, that ye require by the Table proceeding in howres and minutes, and therewith enter this Table, the howre at the ſide, and the neareſt minute at the heade, and then deſcende right againſt your howre, and there in the common angle ſhall ye finde the howre and minute, or minutes onely that the Planet rayneth by the howre of the clockes.

As for example.

The 12. of June the daye is 16. howers 20. minutes, wherewith I enter this Table as is ſhewed, and in the angle I finde 1. howre 22. minutes whiche ſheweth that a Planette that daye rules an howre

hower and a quarter and 7. minutes of the clockes. Also for the same night I find it to be but 7. howers 40. minutes, wherewith I enter into this Table with 7. at the side, and 36. at the heade, (for that is nearest) and in the common angle I finde but onely 38. minutes, which shewe that a Planet in that night rules but halfe an hower and 8. minuts of the clocks, and so of the rest.

A declaration of this figure following.

BVt for more ease in accompt, I haue deuised this figure following, which presently shall shew you the hower of the Planet by daye or nyght at all tymes. The vttermest margent whereof is deuided into 24. partes, representing the 24. howers of the Equinoctiall or clockes; which euer are of 60. minutes, and euerie hower is deuided into 4. partes. Within the same haue ye the howers artificiall, or howers of the Planets, aswell for the night, as for the daye, the Orizon line deuiding the same, which for the better knowledge, is bedecked with shadowes, and all that is aboue the same is accompted daye, because when the Sunne comes vppon that lyne in the East, it is daye, for then beginnes the day artificiall. And when the Sunne comes to the same in the West, he departes from our sight, and then beginnes the artificiall night. So likewise all vnder the same is night, and therfore printed blacke, in the center wherof must be put a thread with a knotte, or a small Bede to be remoued at your pleasure.

The

The vſe therof is thus.

Know by the Table for that purpoſe, the riſing of the Sunne for the daye ye deſire, and vppon the ſame hower and neareſt quarter, in the vttermoſt margent lay the thred, remouing vp and downe the knotte tyll it lye vpon the Orizon line, there hold it ſtedfaſt at the center ende, and remoue your other hande to the hower of the clocke called the hower of the daye, eyther before noone or after, then the knotte among the Planetes howers ſhall ſhewe the iuſt hower of the Artificial day, expreſt by figures of Arithmitike, wherewith enter the

Table

The Instruction.

Table of the Planets with the daye at the head, and so the number of the hower shall shew you at the left side, the Planet that rules by daye, and at the right side, the Planet that rules the same hower by night.

As for example.

This daye the 20. of October being Tuesdaye, I wouldе knowe what Planet raygnes at 3. of the clocke, 30. minutes after noone. By the Table of the Sunne rising: I find that the 20. daye of Octob. the Sun ryseth at 7. of the clock 15. minu. which found in the figure, I put the thred therto, and set the knot on the Orizon, then remoue I the thred to 3. of the clocke, 30. minu. after noone in the margent, and the knotte sheweth the 11. hower of the artificiall daye, wherewith I enter the Table of Planetes vnder Tuesdaye, and right against 11. at the left side is ♂, which rules the present. Againe at 10. a clocke at night I wouldе doo the lyke, I remoue the thred to 10. in the margent, & the knot amongst the howers of the night shewes the 5. hower of the artificiall night. Wherewith I enter the Table as before, and finde right against 5. at the right side ♀, which rules the present hower, &c. This done, if ye desire to knowe howe long the Planet of that hower hath ruled, or howe long he shall rule, do thus. Set the thred to the time that ye desire to knowe the Planets hower, & if the knot light right vpon the time that deuides the artificiall howers, then and at the instaunt begins the Planetarie hower, but if the knot fall within ꝑ space, remoue your knot to the lyne proceeding: then shall the thred in the margent shewe at what time the Planet began to raigne, afterwarde remoue the knot to the line following, and the thred in the margent wyll shewe you the instaunt of the clocke when the Planet shall ceale to rule, whereof take this example. Sunday the .xxviij. day of March the

Sun

Sunne ryseth at 5. of the clocke 31. minutes, and at 15. minutes past 9. of the clocke I finde by the forsaide rules the Moone to raigne at that instaunt, because the knotte falles in the mydst betweene the lynes; then set I the knotte backe to the lyne, and the thread sittes vpon 30. minutes after 8. then began Luna to raigne. Then remoue I the knotte to the line following, and the thread doth marke in the margent 45. minutes past 9. of the clocke, and then doth the Moone ende her dominion for that time, tyl her course returne. &c.

The properties of the Planets.

☉ The Sun is an indifferent Planet, hot & drye, and giueth life and light to naturall vertues. Of mans body he rules the braine, the marrow, the sight, the ioynts, the right side whole. He signifieth Kings Princes, Maiestrates, famous personnes desirous of honour, ambitious, kingdomes, Empires, Nobilitie, magnanimitie, fortitude, glorie, rule, honor.

♀ Venus is benevolent fortunate, in mannes body, she rules the reynes, the pappes, throte, loynes fat, sperme and the buttockes. She signifieth the mercifull, the meeke, fayre conditioned, the fine, the pleasant, the delyghtsome, effeminate, lewers, daunсers, banqueters, musitions, & Poets, stabilitie, ciuilitie, loue, mercie, beautie, gifts of friendes, and women, mariage, dowry ornaments, iewels, lust and lecherie.

☿ Mercurie is variable, of his nature to whome he is ioynde, he rules the tongue, the mouth, the memorie, the thighes, & signifieth Philosophers, Scriueners, Marchantes, Painters, deuisers of subtilties, craftie, deceytful, wauering, lying, proude & scorneful, all kinde of Sciences, buying, selling, contracts, honest, studies, diuination and curiositie.

☽ Luna

☽ The Moone is indifferent, colde and moyst in mans bodie; she rules the stomacke, the taste, the bellye, the entralles, the liuer, and all the lefte side. She signifieth Noble women, widdowes, the vulgar sort, and those of continuall mouing, as Mariners, Messengers, Legates and vacabondes, all things that abounde in moysture, the Sea and Riuers with their ebs and floods, the studies of histories, embassages, nauigation, iourneying, seruice, planting and sowing, and all water workes.

♄ Saturne is colde and drye, earthy, malevolent, enemie to nature, destroyer of life, infortunate. He rules the right eare, the splene, the blather, the bones: and signifieth olde men, husbandmen, moynars, masons, tanners, Iewes, enuious personnes, stubburn, solitary, styll leane, beardelesse, couetous, gluttons, deceiuers, husbandrie, fruites of the earth, moynes of mettals, treasures, buildings, heritage of the dead, possessions, prison.

♃ Iupiter is whot and moyst, benevolent, fortunate. He rules the lyghts and longs, the arteries, pulses, and the left eare. He signifieth Bishoppes, Prelates, Lawiers, Iudges, the shamefast, the gentyll and humble. Iust, honest, true, faithfull, liberall, godly, vertuous, and religious, gouerners of Cities, and ritch men, Ecclesiasticall dignities, Relygion, Iustice, honestie, praise.

♂ Mars whot and drye, malevolent, gouerneth the Gall and the vaynes, synewes, and testicules. Hee signifieth warrions, sedicious, disdaynefull, coniurers, irefull, theeues, cruell, bolde, irreuerent, murderers, Captaines, Surgions, Turkes, terrible, violent, careleſſe, workers in fyreworkes, gunners and founders, warre, strife, dissention, tyranny, violence, armourie, alchimie, and all things wrought by fire.

The

¶The names of all the Colledges in both Vniuersities, Oxford and Cambridge, and of their Founders.

Vniuersitie Colledge. 1 Vniuersitie Colledge, Founded by Allured, king of the Saxons, in the yere of our Lord 872.

Bailiol, Coll. 2 Baylie Colledge, Founded by John Bayliell King of the Scottes, in the yere of our Lorde. 1263.

Martin Col. 3 Martin Colledge, Founded by Walter Martin Bishoppe of Rochester, in the yere of our Lorde, 1276.

Excester col. Hartes Hall. 4 Excester Colledge, and Hartes Hall, Founded by Walter Stapleton Bishop of Exceter, 1316. And the sayde Colledge was much encreased by Sir Wylliam Peter, late Secretary to king Henrie the eyght. 1566.

Orial Colle. 5 Oriall Colledge, Founded by Adam Brewne, brought vp in the Vniuersitie of Oxforde, by King Edwarde the seconde, in the yere of our Lord 1323.

Queenes Colledge. 6 Queenes Colledge, Founded by Robert Eglisfielde, Chaplein to Philip, King Edwarde the thirdes wife 1349.

Newe colle. 7 Newe Colledge, Founded by Wylliam Wickam Bishop of Winchester, in the yere of our Lorde, 1375.

Lincoln col. 8 Lincoln Colledge, Founded by Richarde Flemming, Bishoppe of Lincolne. And encreased by Thomas Rotheram, Bishop of the same Sea, in the yere of our Lorde 1420.

All soules. Colledge. 9 All soules Colledge. Founded by Henrie Chicheley, Archebishop of Caunterbury, in the yere of our Lorde. 1437.

Magdalene Colledge. 10 Magdalene Colledge. Founded by Willi̅ Wainfleet

Oxfoorde.

Bete Bishop of Winchester, and Chauncelour of Englande 1456. And hee founded also Magdalene Hall. — Magdalene Hall.

1 Brasen Nose, Founded by William Smith, Bishop of Lincolne, in the yere of our Lorde 1513. — Brasen Nose.

2 Corpus Christi Colledge, Founded by Richard Fore Bishop of Winchester, in the yeare of our Lord 1516. — Corpus christi Colledge.

3 Christes Church, Founded in the yeare of our Lord 1529. by Thomas Wolsey Archebishop of Yorke and Cardinall. And afterwarde landes were giuen for the maintenaunce of the same by King Henry the eight. — Christes Church.

4 Saint Iohns Colledge, Founded by Sir Thomas White, late Maior and Alderman of London, in the yere of our Lord 1557. — S. Iohns Col.

5 Trinitie Colledge, Founded by Sir Thomas Pope Knight, in the yeare of our Lord 1566. — Trinitie col;

Halles of Oxford.
